DIRECTORATE OF INTELLIGENCE

2 March 1984

MEMORANDUM FOR: Mr. David Curry
Room 4134
Treasury Department

FROM : 
Office of European Analysis
Economic Issues Branch

SUBJECT : Further Oil-Supply Disruption Scenarios

 Per your telephone request of 1 March 1984, I used the Linked Policy Impact Model to address the impact of various oil-price rises on the OECD in 1984. In these five scenarios, the average oil price rises from \$29 to \$41, \$44, \$50, \$60, and \$65 respectively. As you suggested, the OPEC import coefficient is adjusted from 0.4 to 0.44. All other assumptions are as described in my memo of 1 February 1984.
